

Reducing Investment Decision Overload

Helping retail investors navigate complexity through smart personalization and curated portfolio guidance.

Retail investors face decision overload when building portfolios

— The Problem

Choice Overload Paralyzes Investors

Retail investors struggle to decide where and how much to invest due to an overwhelming choice

Information Avalanche
500+ funds and thousands of stocks. Users are bombarded with metrics like NAV, CAGR, and Beta, leading to immediate cognitive overload.

Decision Latency
Fear of making the "wrong" choice causes users to delay investing for weeks or abandon the funnel entirely.

Fragmented Guidance
Advice is generic and scattered. Users rely on trending lists or social proof rather than personalized, risk-aligned strategies.

Framework 1: First Principles Thinking

Challenge Assumptions

Breaking down what investors actually need

Do investors need to see all 500+ funds?

No, they need 3–5 curated options matched to their goal and risk profile. More choice = more paralysis.

Does more data (NAV, CAGR, Beta) help?

No, investors need ONE clear signal: "This fund suits your risk level and 5-year goal." Metrics cause overload.

Do ratings & reviews build trust here?

Only when personalised. Generic star ratings fail – investors need risk aligned, goal specific social proof.

CORE NEED

Invest confidently in the right fund for my goal & risk level

✓ ESSENTIAL INFORMATION

Goal Alignment

Does this fund match my target – retirement, home, child's education?

Risk Match

Is the fund's volatility suited to my risk appetite (low/med/high)?

Simplified Performance

"Grew 12% p.a. over 5 yrs" – one clear, jargon free signal.

Minimum Investment / SIP

Can I start with what I have? (e.g. ₹500/month SIP)

✗ NON-ESSENTIAL (strips to remove)

Raw NAV history • Beta / Sharpe Ratio • Fund manager bio • Peer comparison tables

⚠ DECISION BOTTLENECKS

500+ Fund Overload

Too many similar options force comparisons that drain decision energy.

Jargon Paralysis

NAV, CAGR, Alpha, Sortino each metric adds cognitive load, not clarity.

Fear of Wrong Choice

"What if I pick the wrong fund?" causes weeks of delay or full drop-off.

Generic, Scattered Advice

Trending lists & social media tips aren't aligned to personal goals or risk.

KEY INSIGHT

Remove all 4 bottlenecks → reduce time-to-invest from weeks to minutes

Framework 2: Jobs To Be Done

What job is the investor hiring the app to do?

FORMULA
"When I [situation], I want to [motivation], so I can [outcome]."

 **Functional**
What task gets done?

 **Emotional**
How should they feel?

 **Social**
How do others see them?

3 KEY INVESTOR SCENARIOS →

 **Urgent Investor**

 **First-Time Explorer**

 **Goal Planner**

SCENARIO 01
 **Urgent Investor**

Immediate Need • Routine Investment

WHEN
...my salary just credited and I want to invest before I spend it
I WANT TO
...find a suitable fund fast — without reading 50 options
SO I CAN
...put my money to work the same day, confidently

 **FUNCTIONAL**
Browse → filter by goal → invest in under 5 minutes

 **EMOTIONAL**
Feel decisive and in control, not overwhelmed

 **SOCIAL**
"I'm someone who invests regularly" — disciplined identity

SCENARIO 02
 **First-Time Explorer**

Research Phase • Major First Step

WHEN
...I'm new to investing and don't know where to start
I WANT TO
...understand what fund suits me without decoding jargon
SO I CAN
...make my first investment without fear of a wrong choice

 **FUNCTIONAL**
Onboarding quiz → personalised fund shortlist → guided SIP setup

 **EMOTIONAL**
Feel safe, educated and not judged for being a beginner

 **SOCIAL**
"I finally started investing" — aspirational milestone

SCENARIO 03
 **Goal Planner**

Long-Term Goal • High Stakes Decision

WHEN
...I want to build a corpus for my child's education in 10 years
I WANT TO
...see exactly which funds + SIP amount will hit my target
SO I CAN
...invest with a clear plan I can track and trust over time

 **FUNCTIONAL**
Goal calculator → SIP recommendation → progress dashboard

 **EMOTIONAL**
Feel like a responsible, forward-thinking parent

 **SOCIAL**
"I'm planning my family's future" — social status signal

 All 3 scenarios share ONE pain point: too many choices, too little personalisation — the exact problem this product solves.

Case Study: Netflix

How Netflix reduced 15,000+ titles to a confident, personalized 'next watch'

Same problem as ours: **too many choices** → **decision fatigue**. Netflix's answer: don't show everything **show the RIGHT thing**.

HOW NETLIX SOLVED IT

-  **Personalized Rows**
Not one list → curated rows by mood, genre, continuation. Each row solves a different user 'job to be done'.
-  **80% Algo + 20% Editorial**
Balances machine intelligence with human curation removes cold pure logic and cultural blindspots.
-  **Thumbnail Personalization**
Balances machine intelligence with human curation removes cold pure logic and cultural blindspots.
-  **Social Proof Signals**
'Trending in India', '#1 today' → reduces analysis paralysis by shifting trust to crowd validation.
-  **Auto-Preview on Hover**
30 second preview removes uncertainty you know exactly what you're getting before committing.

Netflix Principle

- Personalized rows by job-to-be-done
- Thumbnail personalization per viewer
- 'Trending in India' social proof
- Auto-preview before commitment

Investment Equivalent

- Goal-based investment buckets
Retirement / Home / Education)
- Risk-profile matched allocation
shown first to user
- 'Most chosen by investors
with similar goals as you'
- 1-tap return projector see outcome
before investing any capital

3 Transferable Principles

- 1 Reduce visible options to relevant options → not just fewer**
- 2 Social proof reduces individual analysis burden**
- 3 Let users preview outcomes before committing capital**

Solution Overview – Smart Portfolio Decision Framework

A guided investment experience that helps retail investors build a portfolio *based on goals and risk profile* instead of browsing hundreds of funds.

Key Value Proposition:

Reduces decision overload by:

- Starting with goal-based portfolio construction instead of product browsing
- Showing only 2–3 curated funds per asset category
- Using simplified decision metrics for easier comparison
- Providing a single portfolio dashboard to track all investments

User Benefits:

Faster Decisions

No longer need to compare hundreds of funds

Higher Confidence

Curated recommendations and simplified metrics

Better Diversification

Guided asset allocation helps users build balanced portfolios

Investor (User) Journey

User Onboarding

Goal Setting

Risk Appetite Analysis

User Education

Guided Portfolio Building

Curated Fund Selection

Comparison

One-Click Investment

Portfolio Dashboard

Solution Details

Guided Portfolio Construction

Goal Selection

Time Horizon Selection

2-Minute Risk Quiz

Recommended Asset Allocation

Wealth Creation
Emergency Fund
Retirement
Tax Saving

1–3 years
3–5 years
5–10 years

Income stability
Loss tolerance
Investment experience
Liquidity needs

Example:
Equity – 60%
Debt – 30%
Gold – 10%

Curated Fund Selection

Users have to search through the hundreds of available options

Earlier

Users see 2–3 curated options per asset class

EQUITY

Debt

Gold

Now

Users can add or remove funds while building the portfolio.

Solution Details

Terminology Confusion

Progressive Disclosure Fund Cards

Users see only the 4 most important metrics

This keeps the interface simple for beginners while still informative for advanced users

Layer 1: Decision Essentials (Default View)

Layer 2: Advanced Details (Expandable)

One-Click Portfolio Investment

Users invest across the selected funds in one transaction

Faster Execution

Simplified Investing

Reduced Friction

How the Solution Solves Choice Overload

Pain Point	Solution
Multiple investment options	Curated Shortlist of Funds
Too Many Financial Metrics	Progressive Disclosure UI
Complex Comparisons	Simplified Fund Cards
Fragmented Investments to track	Unified Portfolio Dashboard

Implementation & Impact

BUSINESS VALUE

The Smart Portfolio Decision Framework directly addresses the **drop-off problem in retail investment funnels** — users who abandon before investing due to overwhelm. By compressing the **goal → invest** journey into a guided 5-step flow, **the product increases conversion at every stage of the funnel**.

For the platform, **more first-time investors completing their first SIP** = higher AUM growth, stronger retention, and a defensible moat through personalization data.

METRICS TO BE TRACKED

Onboarding Completion Rate — **% of users who finish the goal + risk quiz flow**

Time-to-First-Investment — **target: under 5 minutes from app open**

Fund Selection Drop-off Rate — **where users abandon during curated shortlist review**

SIP Activation Rate — **% of users who set up a recurring investment post-onboarding**

Portfolio Dashboard MAU — **measures ongoing engagement, not just acquisition**

Decision Reversal Rate — **how often users swap or undo fund choices (proxy for confidence)**

CHALLENGES & LIMITATIONS

Curation Bias Risk — A *curated shortlist of 2–3 funds* per category may inadvertently favor certain AMCs; *requires transparent selection criteria* and periodic audits.

SEBI Compliance — Any personalized *fund recommendation* must be SEBI-registered advisory *compliant*; the product *must be framed as "guided exploration"* rather than financial advice.

Cold Start Problem — *First-time users have no behavioral data*; risk quiz answers alone may produce *shallow personalization* until transaction history builds.

Advanced Investor Alienation — *Power users may feel constrained* by the simplified interface; *progressive disclosure* and an *"Expert Mode" toggle* would be needed.

Market Volatility Sensitivity — *Projected returns* shown during onboarding (*best/typical/worst case*) may erode trust during bear markets if *framing isn't carefully managed*.

Thank You
