

ChatGPT

Projects

● ● *Where Chats Become Workspaces*

Product feature Analysis

ChatGPT, developed by **OpenAI**, is an AI-powered conversational platform that helps people **research**, **create**, **learn**, and **solve problems** through natural language—transforming how individuals and teams access knowledge and get work done.

COMPETITORS

Claude

Gemini

What did Projects solve for users?

USER PAIN POINT

Before the **Projects** feature, users struggled to **organize** and **recall** knowledge associated with a particular task/project across conversations.

MANUAL WORKAROUNDS

Keeping long single chat threads and repeatedly scrolling

Renaming chats manually and relying on memory

Using keyword search across chat history

Copy-pasting important outputs into external tools (Notion, Google Docs)

FEATURE VALUE

Projects introduced a **containerized workspace** layer that improved content **organization**

Grouped related chats under one project umbrella

Enabled task-level separation (e.g., one project per initiative)

Reduced cross-conversation clutter in the main chat list

Multi-session continuity of context & file sharing

Who are the target customer segments?

🎓 Student

Age 15

Class 10 student preparing for board exams and school projects

GOALS

Use ChatGPT to understand complex academic topics

Ask progressive follow-up questions

Build a clear conceptual understanding

"I asked many questions about this topic earlier, but I can't see them together"

<> Developer

Age 27

Software Engineer at a mid-size tech company

GOALS

Use ChatGPT to troubleshoot coding problems and explore system design concepts.

Maintain a record of solutions and reasoning that can be reused later

"I know I've discussed this architecture problem with ChatGPT before, but I can't see the full chain of ideas that led to the solution"

👔 Manager

Age 37

Mid-career Product Strategy Manager at a Bengaluru SaaS startup

GOALS

Use ChatGPT to explore product strategy frameworks

Build structured thinking across multiple sessions

Maintain a knowledge base of strategic discussions

"I know we discussed this earlier with ChatGPT — but I can't see how all those ideas connect to further evolve on them. Everything is so scattered"

User Journey Map

STAGE	Conversation Initiation	Knowledge Recall Attempt	Iterative Exploration	Work Continuation Under Friction
GOALS	Quickly understand the topic and generate useful material	Quickly retrieve a high-quality past series of responses & ideas	Build deeper, cumulative understanding. Refine outputs over time	Move forward with the task despite retrieval difficulty
TOUCHPOINT	ChatGPT chat interface, Project workspace	Chat history list, Search (if used), Multiple conversation windows	New chat prompts, Manual context typing	External notes (if any), Redundant re-prompting
PAIN POINT	No structured way to tag or organize knowledge from the start	Difficult to navigate to previous important conversations	Knowledge starts getting fragmented across conversations	Loss of cumulative intelligence, Inefficient knowledge recall
EMPATHY	Excited	Confused	Engaged	Frustrated

Existing Challenges

01

Does not **aggregate** all responses about a topic

02

Does not tell how **conversations** relate to each other

03

No branch exploration from earlier ideas

04

Mental mapping burden remains: which chat, thread wording

INTRODUCING

Tags

From scattered responses to structured knowledge

How does it help?

FEATURE

HOW DOES IT HELP?

 Tag any AI response to a topic

 Turns isolated answers into knowledge base

 All tagged responses aggregate under that topic

 Eliminates copy-pasting to external tools

 Topic-level AI summary

 The structure lives where the thinking happens

 ChatGPT recommends related questions to enrich context

 Reduces re-prompting overhead for returning users. Also, further builds on the context

User Journey

- 1 User opens Projects and names a new one.
- 2 Every recent chat carries its topic tag — colour identifies the topic.
- 3 Topics (tags) sit beside Chats — counts show how much is collected.

User Journey

- 4 Everything tagged to the topic, grouped by source chat.
- 5 Topic-level synthesis expands in place, below its own card.
- 6 Suggested next questions, addable straight into the topic.

User Journey

- 7 The answer arrives already written, inside the topic.
- 8 Tags live on the response itself — one tap back to the thread.
- 9 Concepts as nodes, their relationships as edges — the shape of one tag.

Key Metrics

ADOPTION FUNNEL

DEPTH OVER TIME

4

Avg. # of tags created per active project (Week 1 vs Week 4)

Compares the first week of use with the fourth
